

LZ-2284-D-7 (1 STEP & 3 STEPS)

DIRECT DRIVE HIGH SPEED ZIGZAG SEWING MACHINE WITH AUTOMATIC THREA TRIMMER

Main features:

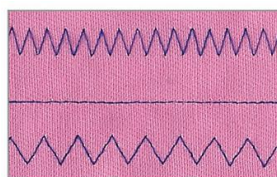

1. This machine uses a new type of rotating thread take-up rod, which can obtain high-quality and stable stitches even under extremely low tension. The shuttle shaft is used with a compensation mechanism, and the left and right positions of the rotary shuttle are equal when hooking the thread, which can prevent thread skipping and thread breakage. For stretchable fabrics, it is equipped with a slight presser foot lift device to gently float the presser foot, and then sew, and the stitches are neat and beautiful.
2. The specially designed winder is faster and more convenient to use.
3. This machine can do straight sewing, 2-point zigzag sewing, and 4-point zigzag sewing.
4. The direct drive type is equipped with an automatic thread trimming function, which greatly improves the production and use efficiency of the machine.
